

DATA CITIZENS AND DATA ORGANISMS PUBLIC LECTURE

**Prof Geoffrey C. Bowker,
University of California, Irvine**

A public lecture organised by the ERC funded ARITHMUS project in association with the Centre for Invention and Social Process (CISP), Department of Sociology, Goldsmiths.

Prof Geoffrey C. Bowler is professor at the School of Information and Computer Science, Director of the Evoke Laboratory, which explores new forms of knowledge expression, and founding member of the Council for Big Data, Ethics and Society.

Drawing examples from the quantified self-movement and big data analytics more generally, Prof Bowker will explore how the concept of selfhood can be enriched by considering ourselves as existing both inside of our own bodies and minds and within extended data networks.
